Film

Who are we?

Pro-Motion Marine offers professional on water film production services. We can supply a specialized camera boat to shoot from, manage a picture boat or coordinate a complete marine unit. Pro-Motion Marine has the equipment and crews to simply support your on water needs on a specific project basis. Pro-Motion Marine has been involved in large feature film, TV and advertisement productions. Styled in the same manner as SFX companies, we offer complete marine film production support service packages.

The camera boat in it's basic form includes twin 2005 Honda 4 stroke engines, multiple tie in points for pipe rigging, hard points for small camera cranes, bounces and production equipment. The boat measures 28' X 12". Most importantly, we can accommodate up to 20 crew with 3 cameras. Our raised pilot station allows the skipper to navigate safely, without interfering with filming operations. The design of the boat provides excellent stability on inland waterways in reasonable weather. In addition to the standard rigging, the following equipment is available.

- Picture boat towing rig port or starboard.
- Dolly ramp at water level (adjustable) port or starboard.
- Floating on water generator/lighting pod.
- Forward mounted pipe rig for water level shots off the bow.

Special rigging is considered on a per project basis. The camera boat will carry in excess of 4 tons of crew and equipment.

Marine Coordination 2977227

Pro-Motion Marine's film production services include locations scouting, picture boat research and sourcing, marine rigging, safety & support boats in addition to our specialized camera pontoon boat.
